Welcome

Welcome to the official brand guidelines for NILOTICA SHEA. This document serves as a comprehensive guide to understanding and applying our brand elements consistently. Our goal is to ensure a unified and recognizable brand presence across all platforms.

Value Proposition

General

Nilotica Shea is the only cold-pressed, high-oleic African shea butter that combines superior skin bioavailability with verified ethical sourcing and ancestral East African knowledge—delivering measurable skin performance while generating sustainable livelihoods across its origin communities.

Facing B2B audiences

Nilotica Shea is a differentiated, origin-verified, cold-pressed, high-oleic shea butter from East Africa that delivers premium dermo-cosmetic performance while operating under structured traceability systems and full compliance with international cosmetic regulations—bridging high-value skincare with inclusive, sustainable trade.

Facing B2C audiences

The only cold-pressed, high-oleic shea butter from East Africa that melts into the skin with exceptional absorption, delivering deep nourishment without residue—while honoring generations of ancestral knowledge and empowering the women who harvest it.

Nilotica
Shea

Visual Identity

The visual identity of Nilotica Shea is inspired by the shea tree, a symbol of life, natural origin, and tradition in East Africa. The emblem integrates the tree within an oil drop, representing the transformation of the shea seed into one of the most valuable ingredients in natural cosmetics.

At the top of the symbol, the shea seed silhouette represents the origin of the production cycle, while at the bottom a drop shape symbolizes the extracted oil, the essence of the final product. This composition visually represents the journey from seed to oil, connecting nature, ancestral knowledge, and well-being.

The sans serif typography introduces a clean and contemporary language that balances tradition and modernity within the brand identity.

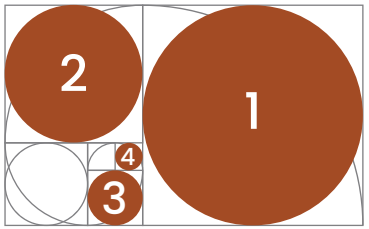
Logo

Constructions and proportions



The Nilotica Shea logo is constructed using a geometric structure based on the golden ratio, employing a grid of circles that defines the relationships of size, balance, and alignment between the symbol and the logotype.

This construction establishes precise visual harmony among all elements of the brand. The curves of the symbol, representing the shea tree within an oil drop, are developed from circular modules derived from the golden ratio, creating an organic and balanced form.

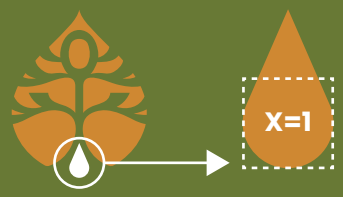
The system also defines the relationship between the emblem and the typographic composition, allowing the logo to be used in two main configurations: horizontal and vertical versions. Both maintain the same structural proportions to ensure consistency and visual coherence across all brand applications.

This geometric structure guarantees that the logo maintains its balance, legibility, and recognizability at any scale or medium.

Horizontal Version

Vertical Version

Safe Space



To ensure proper visibility and legibility of the Nilotica Shea logo, a clear space area must be maintained around the symbol. This space must remain free of any graphic, typographic, or visual elements.

This protective area preserves the integrity of the logo and prevents visual interference that could affect its recognition. The minimum clear space is defined by a module "X", equivalent to the diameter of the drop located at the base of the symbol. This measurement must be respected on all sides of the logo in both the vertical and horizontal versions.

Maintaining this clear space ensures the brand retains its clarity, presence, and visual hierarchy across all applications.

Vertical Version

Horizontal Version

Symbol

Minimum Size

To ensure proper legibility and recognition of the Nilotica Shea brand, minimum reproduction sizes are established for each version of the logo. These measurements ensure that all elements of the logo maintain clarity and proportion across different applications.

Horizontal version

The horizontal logo version is recommended for applications where the layout is wide or height is limited.

Vertical version

The vertical version is used when the available space is more compact or when a centered composition is required.

Symbol

The symbol may be used independently in applications where the brand is already recognized or when space is limited, such as favicons, stamps, or graphic elements.

Printed media	Digital media
Symbol Minimum_Size: **10 mm width**	**Symbol** Minimum_Size: **45 px width**
Vertical logo without sub-brands Minimum_Size: **15 mm width**	**Vertical logo without sub-brands** Minimum_Size: **50 px width**
Vertical logo with sub-brands Minimum_Size: **15 mm width**	**Vertical logo with sub-brands** Minimum_Size: **50 px width**
Horizontal log without sub-brands Minimum_Size: **25 mm width**	**Horizontal log without sub-brands** Minimum_Size: **80 px width**
Horizontal logo with sub-brands Minimum_Size: **25 mm width**	**Horizontal logo with sub-brands** Minimum_Size: **80 px width**

***Using the symbol below these measurements may compromise the legibility of its shapes.**

Logo versions

The Nilotica Shea logo has two primary configurations designed to adapt to different formats and applications while maintaining its visual integrity.

Vertical version

The vertical version places the symbol above the typographic logotype. This is the primary version of the brand and is recommended for applications where a centered and balanced composition is required, such as packaging, labels, editorial pieces, or institutional communication.

Horizontal version

The horizontal version arranges the symbol alongside the typographic logotype in a lateral composition. This version is intended for applications where the layout is wider or height is limited, such as headers, digital layouts, signage, or horizontal formats.

Both versions maintain the same proportions, structure, and alignment defined in the logo construction system, ensuring visual consistency across all brand touchpoints.

Logo Proportions with Sub-Brands

The Nilotica Shea brand architecture is designed to allow the brand to expand into different geographic subsectors and product categories, while maintaining a consistent and recognizable visual identity.

The system is based on a Master Brand supported by descriptors that identify each subsector. This structure allows the brand to organize its communication without losing visual unity.

Master Brand

Nilotica Shea functions as the core identity, representing the origin, tradition, and quality of shea-derived products.

Geographic subsectors

Geographic subsectors identify the territorial origin of the product, reinforcing the authenticity and traceability of the brand.

Nilotica Shea Uganda
Nilotica Shea Ethiopia
Nilotica Shea South Sudan

Product subsectors

The architecture also allows differentiation between product categories derived from shea.

Nilotica Shea Butter
Nilotica Shea Oil

These descriptors function as extensions of the master brand and must always follow the proportions, typography, and usage rules define in this manual. This system allows the brand to grow in an organized way while maintaining consistency, recognition, and clarity across markets and products.

Color Palette Primary and Secondary

The Nilotica Shea color palette is inspired by the natural elements of the shea ecosystem: the seed, the butter, the oil, and the African landscape where the shea tree grows.
The color system is structured around two primary colors, directly connected to the origin of the product, supported by complementary tones that enrich the visual narrative of the brand.

Primary Colors | **Secondary Colors**

Shea Earth

This color represents the natural tone of the shea seed, the essential element at the origin of the product. Its warm and organic character conveys connection to African soil, authenticity, and tradition.

It is used as one of the dominant colors in the visual identity, particularly in institutional backgrounds, main graphic elements, and high-impact brand applications.

HEX #A44A23
RGB 164 / 74 / 35
CMYK 0 / 55 / 79 / 36

Natural Sand

This color evokes the texture and softness of shea butter, bringing balance and lightness to the color system. It acts as a base tone that allows the creation of softer and more natural visual compositions.

It is frequently used in backgrounds, large surfaces, and applications where a clean, warm, and natural atmosphere is desired.

HEX #D4C097
RGB 212 / 192 / 151
CMYK 0 / 9 / 29 / 17

Shea Amber

Inspired by the warm tones of shea oil, this color adds energy and vitality to the system and functions as a visual accent within the brand identity.

HEX #C9842F
RGB 201 / 132 / 47
CMYK 0 / 34 / 77 / 21

Nilotica Green

Represents nature and the environment where the shea tree grows, reinforcing the brand's values of sustainability, growth, and connection to the African landscape.

HEX #6E7F38
RGB 110 / 127 / 56
CMYK 13 / 0 / 56 / 50

Deep Black

Used to create contrast, improve readability, and add sophistication in typographic and graphic applications.

HEX #000000
RGB 0 / 0 / 0
CMYK 0 / 0 / 0 / 100

***The combination of these colors creates a visual identity that is warm, organic, and aligned with the values of origin, nature, and tradition that define Nilotica Shea.**

Color Palette Usage

The visual identity of Nilotica Shea allows the logo to be used in different color combinations derived from the official brand palette. These applications ensure visual consistency and flexibility across different communication contexts.

Use on colored backgrounds

The logo may be applied over the main colors of the brand palette. In these cases, the symbol and typography appear in white or light tones, ensuring strong contrast and readability against the background. This application helps maintain a strong and consistent visual presence across graphic pieces, packaging, labels, and digital communication.

Monochromatic versions

When printing conditions or specific media require it, the logo may be used in monochromatic versions derived from the main brand colors.
These versions preserve the integrity of the symbol while maintaining a consistent visual identity in applications where the full color palette cannot be used.

Use on photographic images or illustrations

The logo may also be applied over photographs or illustrations, provided that sufficient contrast is maintained to ensure readability.
In these cases, the white or light version of the logo is recommended. When necessary, solid color areas derived from the brand palette may be used to reinforce visibility.

***These guidelines ensure the brand maintains clarity, recognition, and visual consistency across all media and formats.**

Tipography

The institutional typeface of Nilotica Shea is Poppins, a contemporary sans serif font family that brings clarity, balance, and modernity to the brand's visual identity.
Its geometric structure and clean shapes allow clear and accessible communication while maintaining an elegant and modern aesthetic. This typeface reinforces the natural and contemporary character of the brand, enabling consistent use across both print and digital media.

Primary Typeface
Poppins is used as the main typeface of the brand's visual system and should be applied across all institutional communication materials.

Typographic Hierarchy

ExtraLight	Regular	**Bold**
A	A	**A**

***Typographic Use**
Consistent use of the typeface helps maintain a clear and recognizable visual identity. It is recommended to always respect established proportions, spacing, and typographic hierarchy to ensure readability and coherence across all media.

Misuse Do´s and Dont´s

To preserve the visual integrity of Nilotica Shea, the logo must always be applied respecting the proportions, colors, and structure defined in this manual.
Any alteration of the symbol or logotype may affect its recognition and visual consistency. For this reason, the following incorrect applications must be avoided.incorrect applications must be avoided.

Modify the proportions of the logo by stretching or compressing it.

Alter the arrangement of the elements that compose the symbol and logotype.

Change the official colors to tones outside the institutional palette.

Apply visual effects such as shadows, gradients, outlines, or transparency.

Rotate or tilt the logo from its original orientation.

Place the logo on backgrounds with insufficient contrast that affect readability.

Alter or replace the institutional typography used in the logo.

Redraw or modify the shea tree symbol.

***Following these guidelines ensures that the brand maintains a consistent, recognizable, and professional visual identity across all applications.**

Graphics System

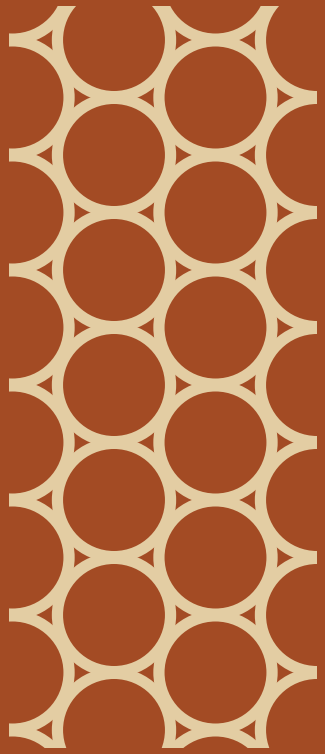
The graphic system of Nilotica Shea is built from the organic shapes present in the brand symbol, particularly the curves representing the shea tree, the seed, and the oil drop.
These elements serve as the foundation for developing patterns and graphic resources that enrich the brand's visual identity.
The use of these elements allows the visual language of the brand to extend beyond the logo, creating dynamic and consistent compositions across different applications.

Graphic elements

Patterns and visual resources may be derived from:

Texture of the shea tree trunk

The shape of the seed



The silhouette of the oil drop

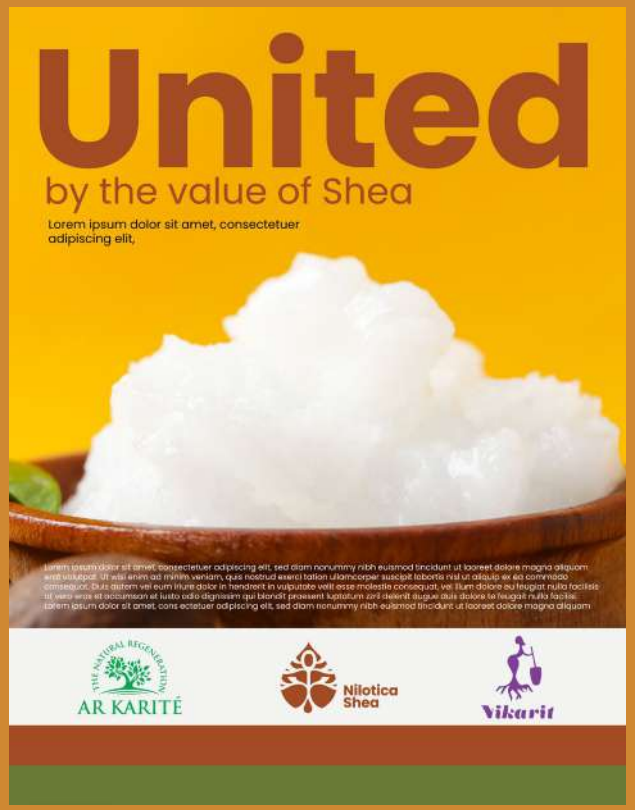
***In all cases, these elements should be used in a balanced way, maintaining coherence with the color palette and avoiding visual competition with the logo. This system allows the brand to develop a rich and flexible visual identity while reinforcing the natural, cultural, and authentic character of Nilotica Shea.**

Cobranding and Endorsement

The most conventional concept of co-branding is associating two brands with the goal of increasing the value and the profitability of both of them.

Level 1:
Where our brand has total control over the guidelines.

Level 2:
Where our brand has shared control over the guidelines.



Level 3:
Where our brand has little control over the guidelines and is not predominant.

Bringing it all to life

We can use our brand identity elements and principles to create new assets and applications as they are required.
